Q: Read file and write new file in large quantities I have a large file which I'm reading from and copying into a new output file, specified by a for loop. It seems to work (about four minutes per file), but only if I give it only one file. If I give it a whole folder, it fails. What I'm trying to do is get the program to read the file, and copy it to the output file, so I can eventually have a lot of different output files based on data from one folder. #include #include #include #include #include using namespace std; ofstream newFile(string, ofstream); int main() { string sourceFile, destinationFile; string code; int i=0, j=0; string directory; time_t tt; time (&tt); directory = "C://Users/Finder//Desktop/testFiles/"; newFile.open(directory + "test1.txt", ios::app); cout

Photoshop brushes are often very versatile and extend beyond their base purpose to create some really unique looks. For example, you may want to create a lightning effect using a fire brush; you can create clouds using a wind brush, and you can paint a cool effect on a person's skin with a skin brush. Photoshop gives you endless possibilities for designing unique effects, but sometimes you don't want to try creating something from scratch. If you're stuck on what to create with your brushes, try experimenting by copying another brush or effect you have already created. Just be sure to change the settings on your brush and effect, or you won't be able to create a decent design. To start your brush: 1. Open the brush you want to use. By default, Photoshop will open the brush you last saved from a website or a desktop app. 2. On the Brush window, click on the New Brush button and choose Copy from the pop-up menu. You can also right-click on the canvas to bring up the pop-up menu and choose Copy. 3. Open an image you want to paint with your new brush. To paint your brush: 4. In the Brush window, click on the paint icon in the upper-right corner and choose the brush you just copied. 5. Now you can drag your brush around. Click and hold on an area to keep your brush there for a quick paint effect. Click and drag away to cover the entire canvas. 6. You can also click and drag the crop area handles to adjust the size of the brush's paint. 7. To clean up the brush, select it by clicking on it and choosing the Erase tool from the pop-up menu in the paint tool. 8. Finally, press the Backspace key to erase the brush. Photoshop brushes can be seen in the Photoshop Creative Web article. Stay up to date with product news, videos, blog posts and much more.
