I have a VB.NET application, and I am using an SQLite database to store settings and preferences. This is a simple application that starts off with a couple of defaults and is supposed to be able to load from other config settings. I am using the Settings class to set and get settings of the software by the Settings class. I have tried encapsulating each section of the solite, and when I get one of those objects, it seems to have what the Settings class. I can duplicate this problem by creating a Settings object and when I get on set on it. Just nothing happens after that. Wy would this happen? I cansumed that whenever the.Get or.set on it. Just nothing happens after that. Wy would this happen? I assumed that whenever the.Get or.set orgence(String) when A gets/sets the pref. value via the underlying storage engine. As long as Engine.GetPreference(String) does not return null, then the setting is persisted. If it returns null, that means the setting is not persisted. If you want a setting to be persisted when Engine.GetPreference(String) does not return null, then the setting is persisted. If it returns null, that means the setting is not persisted.
