But the problem is, while cracking the password, I am getting the same key as the existing one in ln -s /usr/local/vsphere/vmware/VMROOT I thought about that maybe it will change the file name, but thats not the case and I dont think its a problem that the file already exists. Note: I tried reading this article on Unigine, but while the author mentions saving a screenshot of the virtual machine, I cant do that as the VM is in progress and I cant access it. A: You may be able to bypass all that by just using a local ssh client such as scp and specifying ssh keys. See my answer on the following question for more details about how that works: VSphere 6.0 - Remote terminal access without VAMI - ESXi A: If you need to use VT-X/AMD-V, you'll need to obtain a VMX root certificate from VMware (The certificate must be registered and installed in the hypervisor. Once this is installed, use the following command to generate a default-ssh-keypair: esxcli network ipsec sa create -s IPsec -c IPsecCertificate -m --importcertificate \"C:\Users\Username\Documents\VMware\VMware\ESX-i-6.5.0\iso\US\ESXi_6.5.0\certs\VT-c\VTCTLVT-C.pem\" After you have created the keypair, you will be able to log in to the ESXi server as root using the default-ssh-keypair. The following command is the recommended one: esxcli network ipsec sa login \ -u root \ -p esxsrvt -s default-ssh-keypair \ -a IPsecCertificate \ --passphrase "PASSWD" Once you are logged in, you will need to encrypt the VMDK files you want to access using the following command: vmkfsencrypt --vmkfile This command will ask for the password you will use to decrypt
