Currently the most widely used of the drafting programs is AutoCAD, which has an estimated market share of 20 percent in the industry. As of January 2009, there were a total of 17 AutoCAD versions available: the newest version is AutoCAD 2010. The oldest current version is AutoCAD 2006. The programs provide a variety of different functions to aid in the production of architectural and engineering drawings, including project management, drafting, and an advanced page layout and pagination system. The programs allow a user to model three-dimensional objects on a computer screen or display them as two-dimensional drawings. Users can also integrate various types of content into a model, such as text, images, video, audio, and 3D environments. Contents History AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. The program was initially developed by Jim Fowler and his team at the Raytheon Engineering Company. It was named after the obsolete model of American military aircraft (the A-10 Thunderbolt II), which was also the reason for the package being released under a BSD license, a license intended for use in the software industry. Fowler and his team wanted a program that would be inexpensive enough to be affordable to small firms, and a version specifically aimed at engineers was the first version of AutoCAD. Fowler's early plans for AutoCAD included a markup language called AutoLISP to create content. The plan was to use a program called Eurolisp, which was a modified version of AutoLISP developed by Fowler's colleague Jim Mitchell, for this function. EuroLISP was eventually used for creating AutoCAD's functions, but EuroLISP was discontinued after the release of AutoCAD 1.0. AutoCAD was first released on the microcomputer platform of the PC-based Apple II and Macintosh computers, and on the IBM PC compatible. The first commercially available versions of AutoCAD were aimed at engineers and architects rather than the desktop market. In order to reach the desktop market, Autodesk licensed the program from Raytheon to develop a new version of AutoCAD for the IBM PC. Raytheon also published its own versions of the software: Engineering CAD (later renamed to AutoCAD), and Technical Designs. AutoCAD 1.0 was released in 1986. This program was the first desktop CAD software to use parametric drawing.

Vectorworks Vectorworks is the successor to AutoCAD LT. It supports the same formats as AutoCAD. Vectorworks was purchased by Autodesk in 2008, and was discontinued on August 31, 2013. CADAGI Another popular CAD software is CADAGI (Computer-aided design for Agricultural Engineering). It is a 2D modelling software developed by CEAC (formerly DMS, the French Développement d'informations agricoles et sanitaires) based on the GIS software QGIS. CADAGI is a CAD software based on open source GIS. It was written on the OpenLaszlo framework and released on 23 June 2008. It has been used for developing agricultural applications. Its native file format is KDX. CADAGI has been deprecated from version 6.0 onwards, which will be the last version developed by the original developers. US Platform In the U.S., AutoCAD is a registered trademark of Autodesk, Inc. In other countries, Autodesk licensed the AutoCAD trademark for use under other names, including AutoCAD LT (for use in the U.S., the UK, Australia, and most of Asia), and AutoCAD Architectural Desktop (for use in Europe and Canada). The list of commands can be found in your Autocad shortcut menu. This is the same command list as is in Autodesk AutoCAD. Loading and Saving files The Print command allows you to print the design from the object you have selected or the entire drawing (the file you have specified). The Export command allows you to save a print file or export to an other application. The Commands in this document are divided by Section, so you can use the Search function to locate a specific command. Sections ----- - File >> Load - File >> Save - File >> Print - File >> Export - Printing - Document Properties - Settings Command List ----- file >> load Load an external file into the drawing. The current drawing is modified to accept the new data from the file. When you exit, the file will be closed. You can also open a new file (see file >> open). file >> save Save the current drawing. The current drawing is modified to accept the new data. You can close the file with this command. file >> export Export the current drawing to another file. Also, with Autodesk Design Review, you can now add annotations to your drawings, so you can communicate how a part or product should be designed with the people who will be using it. (video: 3:10 min.) Contact tracing: Bringing together three-dimensional objects and their associated contacts to create a link between the 2D and 3D world is a core capability of AutoCAD. Autodesk has added a powerful new tool to this workflow: Autodesk Contact Tracing. This tool enables you to draw a contact between two 3D objects as a trace and then you can rotate, animate, and project that contact, without ever re-drawing the object. (video: 2:15 min.) Point-based visualization: Point-based visualization is available in AutoCAD and enables you to see part or assembly views that include context such as dimensions and annotations. (video: 1:10 min.) Synchronized drawing: Synchronized drawing with TeamSpace keeps your drawings up-to-date between local and remote users, enabling you to draw and redraw on the same drawing in real time. (video: 2:55 min.) Accuracy optimization: Reduce the time it takes you to create 3D designs by more accurately placing your objects. This feature enables you to use the offset tool to offset multiple points so you can eliminate many types of errors. (video: 3:30 min.) Want more information about Autodesk® AutoCAD® 2020? Moderate hypothermia is not required in patients with out-of-hospital cardiac arrest. To determine if the beneficial effects of moderate hypothermia during cardiopulmonary resuscitation are dependent on the depth of hypothermia achieved, and whether induced hypothermia can be safely initiated after termination of cardiopulmonary resuscitation (CPR). Prospective, randomized, double-blinded study. Twelve-bed adult intensive care unit of a tertiary medical center. One hundred thirty-five adults undergoing attempted CPR with advanced cardiac life support. All patients received initial standard CPR. At the conclusion of resuscitation, patients were randomly assigned to either therapeutic moderate hypothermia or normothermic treatment. Therapeutic hypothermia was maintained for
