A: You can try this: {{ post.title }} .media-body > h4 { margin-top:0px!important; } A: It's better to make a custom directive instead of trying to apply CSS selectors, the method is already provided in the AngularJS documentation Here is a basic example: angular.module('app', []); angular.module('app').directive('firstTitle', function() { return { restrict: 'A', link: function($scope, $element, $attrs) { var value = $attrs.firstTitle; $element.css('margin-top',value); } }; }); Example here Gastrointestinal bleeding as a first manifestation of acute pancreatitis: the role of endoscopy. Create a checklist of changes from feedback that you've already incorporated into your design and make sure you're back up to date. (video: 1:32 min.) Markup Assist now allows you to quickly annotate any text or callout within your drawing and to include a snapshot of a 3D model in your design. Add comments to annotate measurements of pipes, ducts, or other parts. (video: 1:07 min.) Drawing and Layout: Create to scale drawings from an image, directly from AutoCAD, or from paper (video: 1:20 min.) Added a new Design Language option (STYLELTYPE=X) for 2D drawings to indicate the paper size of imported images. 2D text and objects will no longer scale when moved off the paper (the document scale is adjusted instead). Drawn objects will now always preserve their size and rotation, regardless of the paper size. (NOTE: The same does not apply to image/video imported objects.) In addition to the new STYLELTYPE=X Design Language option for 2D drawings, an improved text and layout engine allows for additional text settings, such as text orientation, text width, and line style, as well as for easier to use text settings. Improved support for multi-file drawings. We made some improvements to the program interface and interface for annotation as well as the user interface for layout. Improved data import and export. Improved support for DGN and MDD files. Improved support for PowerPoint, Word, Excel, PDF, and other file types. When you print from a 2D drawing that includes a 3D model, the model will now be printed and the part will be highlighted in color. We have added a new tab (PRINT) in the Print Setup dialog box to help you get a print job set up quickly. Modeling and Datum Creation: Improved support for cylindrical objects. Improved support for 2D polyline and polygon objects. Model objects will be recognized correctly in the same way now, irrespective of whether the model is imported as a 2D or 3D model. The command palette in 2D mode will now highlight 3D commands available in 2D drawings.
