treatment of acute otitis media in children. The objective was to study the efficacy of amikacin in the treatment of acute otitis media (AOM) when compared with tobramycin, both in the first 7 days of treatment. The study was a prospective, randomized, blinded trial conducted at the ENT Departments of 2 hospitals in the south-

---

west of Sweden during the year 2000. One hundred and three children (3 months to 12 years) were recruited to the study. AOM was the only inclusion criterion, and the diagnosis was based on otoscopy, tympanometry, and/or otological examination. The children were randomly assigned to receive amikacin or

---

tobramycin in drops 3 times daily for 7 days. The side effects of the drugs were studied, and the efficacy of the treatment was assessed by means of the predefined criteria of the World Health Organization during and after treatment. There was no statistically significant difference between the 2 groups regarding age,

---

sex, side effects, or efficacy of the treatment. Our results demonstrate that amikacin and tobramycin are equally effective in treating AOM in children when applied 3 times daily for 7 days.
