Fully Modelled like a Tape Plugin. Fortnite is the biggest game in the world, but it also holds the distinction of being the most un-obtrusive PC game on Earth. Forget PCs that look like PCs — we're talking about a game that won't set up shop on your desktop, with bloaty "fir wall" icons and forced update prompts. Fortnite's game client is the sort of thing you can play anywhere, for as long as you're near a bunch of other people playing the same game. That's not only making it the most dominant game in the history of gaming, but it's also opening up the possibility of a new way to play games, one that goes even beyond the replacement of actual dedicated gaming hardware with a constantly on PC. You remember the Nintendo 64, right? It was a popular gaming system that hit hard, then dropped in popularity because it was basically impossible to find anywhere, and players were forced to buy expensive peripherals to play it. It had one huge advantage over earlier games, though: It played cartridges. If you got a Nintendo 64, you could play any game on that system, from Street Fighter II to Super Mario 64. It was the first generation of gaming that got folks off the PC, at least for a time. And it has remained popular in Japan, with Nintendo's odd-ass backwards cartridge-loading hardware and format doing enough to allow Nintendo to claim the top spot in the past several years. All that is what Fortnite might look like in the future. And it's not just a nerdy way to play with dedicated hardware you can't leave home without, either. The prospect of playing Fortnite on your iPhone or iPad is tempting, and with a few adjustments — like allowing other players to send you free items in exchange for you broadcasting their moves — it wouldn't be hard to imagine a mobile version of Fortnite that would actually be nice to play on-the-go. If a mobile version of Fortnite were to prove popular, it could also help push forward another ambitious idea that's been floated recently: Bring games back to retail. There is actually a small but vocal contingent of fans who believe that the time is coming where physical discs are no longer necessary for "full-price" video games c6a93da74d
